GENDER PAY GAP 2017

A gender pay gap is the percentage difference between the average pay of male employees and female employees. From 2017 employers are required to publish the results of their gender pay analysis using prescribed calculations.

For Manchester Metropolitan University, these calculations are given below, together with the sector and whole society figures taken from the University and Colleges Employers Association (UCEA) “Examining the Gender Pay Gap in Higher Education” (where applicable). The calculations are based on a snapshot of the University’s workforce data taken in March 2017 or, in the case of the bonus calculations, bonuses awarded in the year preceding the end of March 2017.

GENDER PAY BY QUARTILE

The proportion of male and female employees in four pay bands ordered from the lowest pay band (Quartile 1) to the highest pay band (Quartile 4) is shown to the right. The bands have been established by ranking all employees by average hourly pay, starting from the lowest to the highest paid and dividing into quartiles.
